Project Evaluation

Weight	Criterion	Description
10	Project Management	• small tickets • one assignee • descriptive tickets

10	Git, GitHub	• branches
		• one ticket per branch
		• PR descriptions
		• clean commit history
		• merged PRs need to be complete
		• README
		  • Conventions
		  • Project structure
		  • How to run
		  • How to contribute

10	Clean Code	• Modularity • Minimize function side effects • Type "safety" • Well and consistently named variables/functions/classes/files/dirs • Sticking to defined convention • Basic docs
10	Testing	• Use test variations (unit, integration, e2e) that make sense • Narrow test scope • Good coverage (only where it makes sense ofc) • Easy extensibility
10	Experiment tracking	• Mlflow tracking • Config management • Clear metric for evaluation
10	Deployment (API)	• functional (works) • well-defined routes with proper documentation • input validation and error handling with correct codes and useful messages • logging of important events • proper tests for requests/responses • local docker deployment
25	Project specific	
15	Presentation	• sleek slides • good oral presentation • quality of answers to questions
